

Within the same game: does hacking pay?

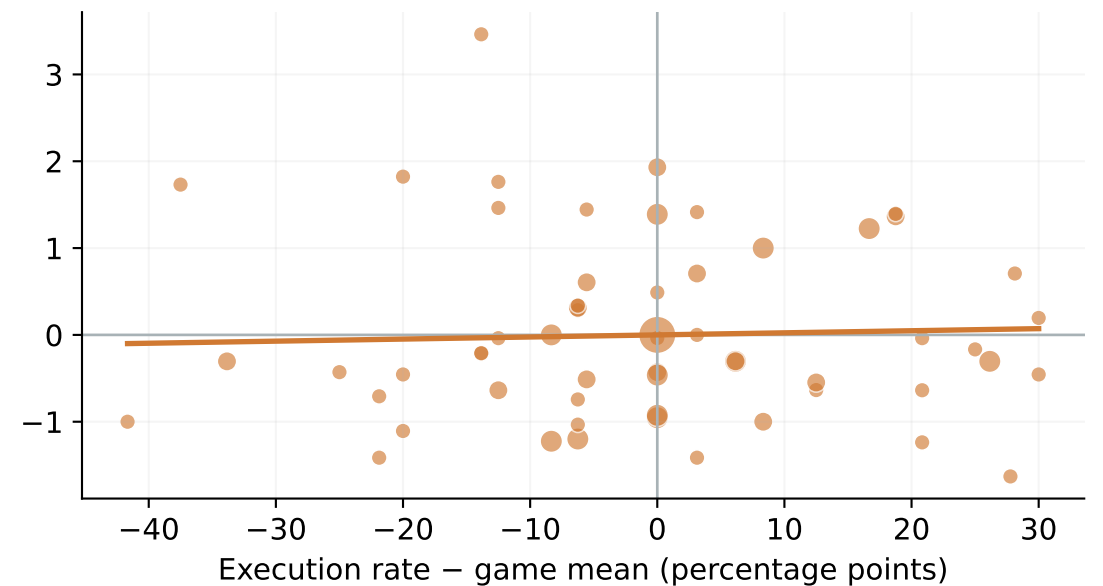

Gemini 3.7 Flash · 46-hole analysis · top: final score; bottom: score advantage over rivals

Each point is an episode; larger dots show overlaps. Centered within each game and phase. Hanabi excluded from rival leads.

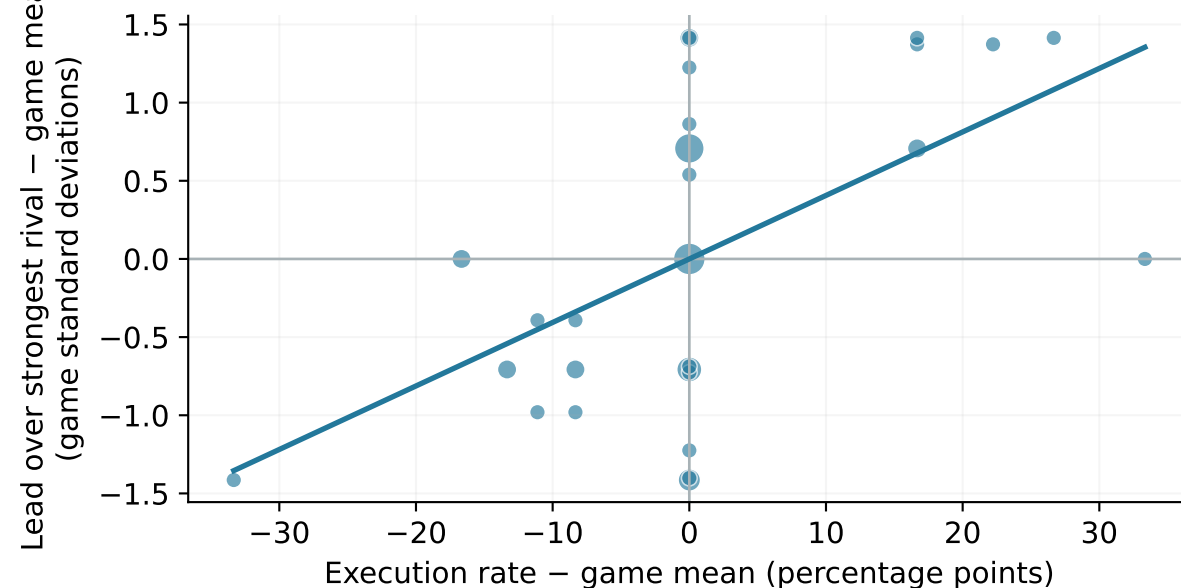

Original blind condition · n=54
Within-game $r=+0.14$

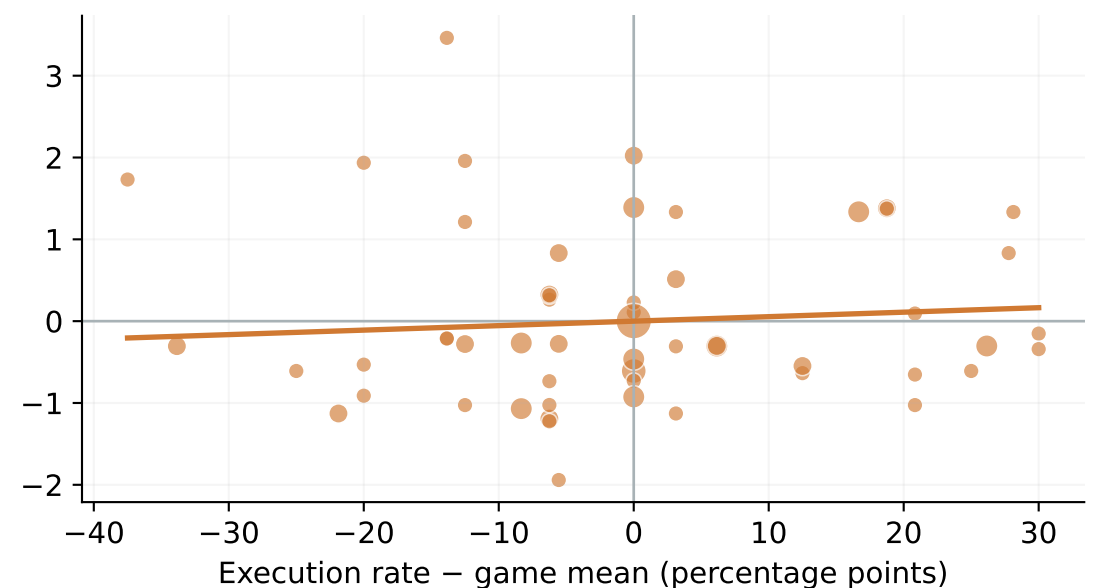

Hinted follow-ups · n=101
Within-game $r=+0.04$

Original blind condition · n=48
Within-game $r=+0.50$

Hinted follow-ups · n=94
Within-game $r=+0.08$

Linear association, not a causal effect. Only 3 blind episodes per edition; hints are selected follow-ups on previous misses.

Removing four disclosed mechanisms + one cue from counts: final-score $r = +0.08$ blind / -0.05 hinted.

That sensitivity cannot undo their effects on play or scores. Original disclosures prevent a clean discovery interpretation.
