

Frontier versus open models

49 matched blind game × seed episodes · current 45-hole filter · broad groups average eligible type rates

Blind execution · zoomed to 0–50%

Same rates on a shared linear scale

Dashed squares: open models, low reasoning, older rules. Solid circles: frontier models, high reasoning, revised rules.

Historical comparison, not an isolated capability-tier test: rules, disclosures, scoring and excluded bonuses changed between runs.

Radial scale starts at zero; outer ring is 50%, not 100%. Execution means an observed mechanism activation, not proven understanding.
