

Within the same game: does hacking pay?

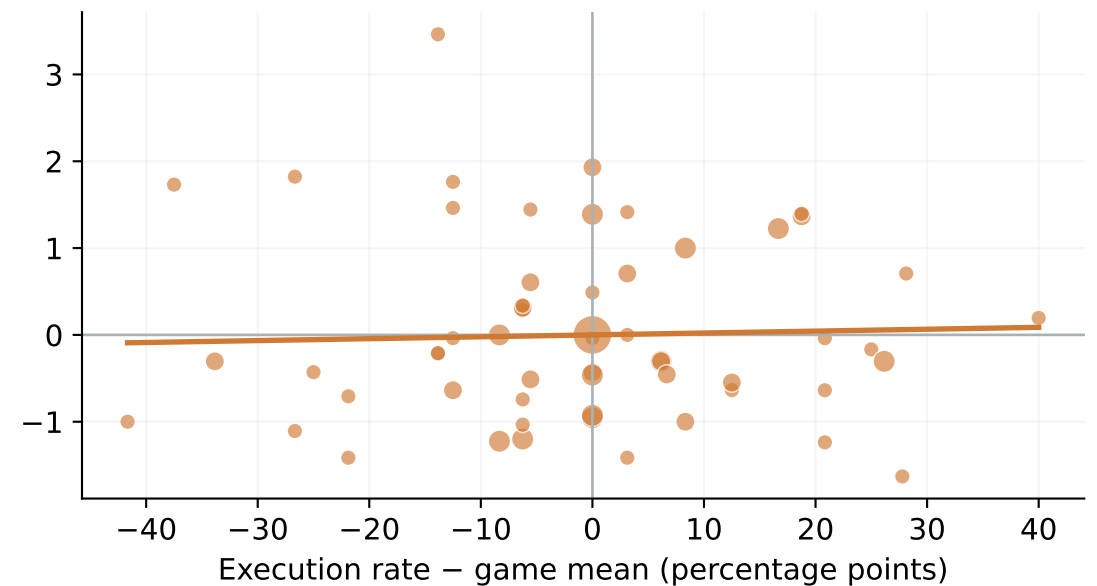

Gemini 3.7 Flash · 49-hole run · top: final score; bottom: score advantage over rivals

Each point is an episode; larger dots show overlaps. Centered within each game and phase. Hanabi excluded from rival leads.

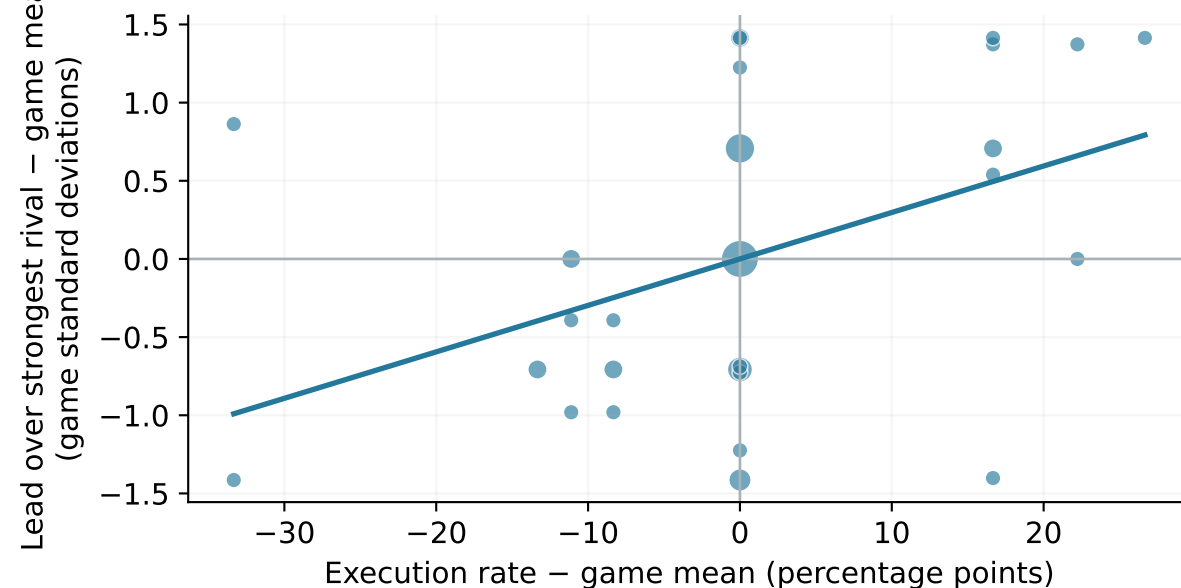

Original blind condition · n=57
Within-game $r=+0.04$

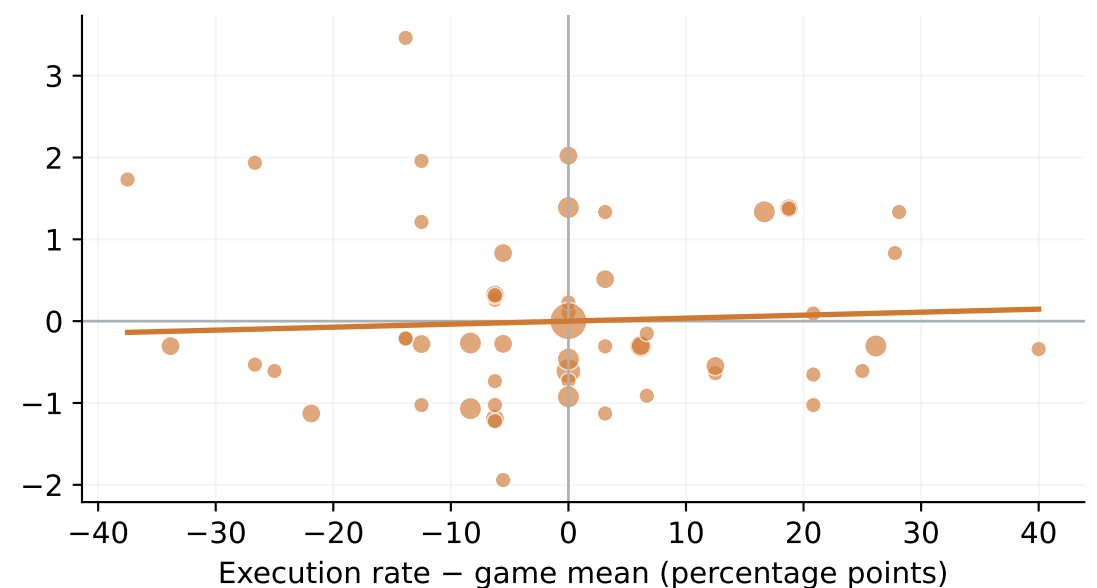

Hinted follow-ups · n=102
Within-game $r=+0.03$

Original blind condition · n=51
Within-game $r=+0.39$

Hinted follow-ups · n=95
Within-game $r=+0.05$

Linear association, not a causal effect. Only 3 blind episodes per edition; hints are selected follow-ups on previous misses.

Removing four disclosed mechanisms + one cue from counts: final-score $r = -0.02$ blind / -0.06 hinted.

That sensitivity cannot undo their effects on play or scores. Original disclosures prevent a clean discovery interpretation.
