

Which hole types does Gemini exploit?

Gemini 3.7 Flash · 46 engine-side holes · coalition excluded · 3 seeds · no reflection

Blind: 37/138 target-seed trials (27%) | **Hinted: 94/101 previous misses (93%)**

Hints reveal one mechanism in a fresh episode. The right panel tests only blind misses; it is not an equal-budget comparison.

“Excluded” means no cells of that type remain after removing the 11 scripted-policy mechanisms. Original rules disclose some effects; execution is not discovery.
